Middle School Math with Pizzazz!

Measurement; Geometry; Perimeter and Area; Surface Area and Volume; Square Roots and Right Triangles

Steve Marcy, Ph.D.
Janis Marcy, M.A.
NOTES FROM THE AUTHORS

MIDDLE SCHOOL MATH WITH PIZZAZZ! is a series of five books designed to provide practice with skills and concepts taught in today's middle school mathematics programs. The series uses many of the same puzzle formats as PRE-ALGEBRA WITH PIZZAZZ! and ALGEBRA WITH PIZZAZZ! both published by Creative Publications.

We believe that mastery of math skills and concepts requires both good teaching and a great deal of practice. Our goal is to provide puzzle activities that make this practice more meaningful and effective. To this end, we have tried to build into these activities three characteristics:

1. KNOWLEDGE OF RESULTS. Various devices are used in the puzzles to tell students whether or not their answers are correct. Feedback occurs immediately after the student works each exercise. For example, if a particular answer is not in the code or scrambled answer list, the student knows it is incorrect. He or she can then try again or ask for help. Additional feedback and reinforcement occurs when the student finds a puzzle solution that is appropriate. This immediate knowledge of results benefits students and also teachers, who no longer have to spend time confirming correct answers.

2. A MOTIVATING GOAL FOR THE STUDENT. The puzzles are designed so that students will construct a joke or unscramble the answer to a riddle in the process of checking their answers. The humor operates as an incentive, because the students are not rewarded with the punch line until they complete the exercises. While students may decry these jokes as "dumb" and groan loudly, our experience has been that they enjoy the jokes and look forward to solving the puzzles. The humor has a positive effect on class morale. In addition to humor, the variety and novelty of procedures for solving the puzzles help capture student interest. By keeping scrambled answer lists short and procedures simple, we have tried to minimize the time spent on finding answers or doing other puzzle mechanics.

3. CAREFUL SELECTION OF TOPICS AND EXERCISES. The puzzles within each topic area are carefully sequenced so that each one builds on skills and concepts previously covered. The sequence of exercises within each puzzle is designed to guide students in incremental, step-by-step fashion toward mastery of the skill or concept involved. A primary goal is the development of problem-solving ability. In order to solve problems, students need not only rules and strategies but also a meaningful understanding of basic concepts. Some puzzles in this series are designed specifically to build concepts. Other puzzles, especially those for estimation, also help deepen students' understanding by encouraging them to look at numbers as quantities rather than just as symbols to be manipulated. For puzzles specifically keyed to problem solving, we have tried to write problems that are interesting and uncontrived. We have included extra information in some problems, and have also mixed problem types within sets, so that the problems cannot be solved mechanically.

In addition to these efforts to make the puzzles effective, we have tried to make them easy to use. The topic for each puzzle is given both at the bottom of the puzzle page and in the Table of Contents on pages iv and v. Each puzzle is keyed to a specific topic in recent editions of leading middle school textbooks. Each puzzle requires duplicating only one page, and many of them provide space for student work. Finally, because the puzzles are self-correcting, they can eliminate the task of correcting assignments.

We hope that both you and your students will enjoy using these materials.

Steve and Janis Marcy
Table of Contents

1. MEASUREMENT: METRIC UNITS
   a. Length ........................................................................................................... 7
   b. Measuring Line Segments with a Ruler ......................................................... 8
   c. Renaming Units of Length ............................................................................. 9-10
   d. Capacity ........................................................................................................... 11
   e. Weight ............................................................................................................. 12
   f. Review: Capacity and Weight ......................................................................... 13
   g. Time .................................................................................................................. 14

2. MEASUREMENT: CUSTOMARY UNITS
   a. Measuring Line Segments with a Ruler ......................................................... 15-17
   b. Renaming Units of Length ............................................................................. 18-19
   c. Capacity .......................................................................................................... 20
   d. Weight ............................................................................................................. 21
   e. Review: Capacity and Weight ................................................................. 22-23
   f. Adding and Subtracting Measurements ..................................................... 24

3. GEOMETRY
   a. Basic Geometric Figures ............................................................................. 25
   b. Angles ............................................................................................................. 26
   c. Estimating Angle Measures .......................................................................... 27
   d. Measuring Angles with a Protractor ............................................................ 28
   e. Drawing Angles with a Protractor ............................................................... 29
   f. Complementary and Supplementary Angles ............................................... 30
   g. Related Angles Formed by Intersecting Lines .......................................... 31
   h. Parallel and Perpendicular Lines ................................................................. 32
   i. Related Angles Formed by Parallel Lines and Transversals .................. 33
   j. Triangles ......................................................................................................... 34
   k. Review: Related Angles .............................................................................. 35-36
   l. Quadrilaterals ................................................................................................. 37-39
   m. Polygons ........................................................................................................ 40
   n. Congruent Polygons ...................................................................................... 41
   o. Similar Triangles ............................................................................................ 42
   p. Circles ............................................................................................................... 43
   q. Lines of Symmetry .......................................................................................... 44
   r. Space Figures .................................................................................................. 45

4. PERIMETER AND AREA
   a. Perimeter ....................................................................................................... 46-47
   b. Circumference ............................................................................................... 48-49
   c. Area of Rectangles ....................................................................................... 50-52
   d. Using a Calculator: Perimeter and Area ....................................................... 53
   e. Area of Parallelograms ................................................................................. 54

NOTES ABOUT USING THE PUZZLES

The selection of topics for MIDDLE SCHOOL MATH WITH PIZZAZZ! reflects recent thinking about what is important in an updated middle school math program. Virtually every puzzle can be matched with a particular lesson in recent editions of popular textbooks. After students have received instruction in a topic and worked some sample exercises, you might assign a puzzle along with a selection of textbook exercises.

Students in the middle grades should begin to classify many mathematics problems and exercises into one of three categories:

1. MENTAL MATH. Problems for which an exact answer can be obtained mentally.

2. ESTIMATION. Problems for which an approximate answer, obtained mentally, is sufficient.

3. TOOLS. Problems requiring an exact answer that cannot be obtained mentally. Students will use paper and pencil and/or calculators.

Some of the puzzles in this series focus specifically on one of these categories. A few puzzles actually present problems in all three categories and ask the student to make the classification.

By the time they reach the middle grades, students should generally be permitted to use calculators for problems that require tools (Category 3). The most common argument against calculator use is that students will become overly dependent on them. This concern, though, appears to be based primarily on fear that students will rely on the calculator for problems in Categories 1 and 2, those that should be done mentally.

To solve problems in Category 3, calculators are wonderful tools for computing. Students may also need paper and pencil to make diagrams, write equations, record results, etc., so they will need both kinds of tools. On the other hand, students should not need calculators for problems in Categories 1 and 2, problems that call for mental math or estimation. Skills in these areas are essential not only in daily life but also for the intelligent use of the calculator itself. The puzzles in this series reflect these three categories and the distinction between them.

When students do use calculators, you may want to have them write down whatever numbers and operations they punch in and their answers. This makes it easier to identify the cause of any error and assists in class management. Even when students do mental math or estimation puzzles, have them write a complete list of answers and, where appropriate, the process used to get the answers. Encourage students to write each answer before locating it in the answer list. Students should complete all the exercises even if they discover the answer to the joke or riddle earlier.

One advantage of using a puzzle as an assignment is that you can easily make a transparency of the page and display the exercises without having to recopy them on the board. You can then point to parts of a problem as you discuss it. It is often helpful to cut the transparency apart so that you can display exercises on part of the screen and write solutions on the remaining area.

What Did the Finger Say to the Thumb?

Choose the correct answer for each exercise. Write the letter of the answer in the box containing the number of the exercise. The table below may help you.

<table>
<thead>
<tr>
<th>Unit</th>
<th>Approximate Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 milliliter (mL)</td>
<td>capacity of an eyedropper</td>
</tr>
<tr>
<td>1 liter (L)</td>
<td>capacity of a juice carton</td>
</tr>
<tr>
<td>1 kiloliter (kL)</td>
<td>capacity of 4 bathtubs</td>
</tr>
</tbody>
</table>

I. Choose the more reasonable estimate of capacity.

1. a pot for cooking  
   K 2 kL  E 2 L

2. a tablespoon  
   C 15 L  I 15 mL

3. an automobile gas tank  
   N 50 L  P 5 kL

4. a swimming pool  
   A 80 L  O 80 kL

5. a drinking glass  
   O 25 mL  M 250 mL

6. a water cooler jug  
   H 20 L  R 2 L

II. Complete each statement. Answers 7 – 14:

7. 8.5 L = _________ mL

8. 0.4 L = _________ mL

9. 90,000 mL = _________ L

10. 250 mL = _________ L

11. 1.75 kL = _________ L

12. 40 kL = _________ L

13. 750 L = _________ kL

14. 3,200 L = _________ kL

III. Solve. Answers 15 – 16:

15. Ms. Sparkle bought 12 cans of diet soda. Each can contained 350 mL. How many liters of soda did she buy? R 48

16. Chef Pierre made 6.4 L of creamed carrot soup. If it is served in 200-mL cups, how many cups can be filled? L 32
What Do Salmon and Cod Use When They Go to War?

Choose the correct answer for each exercise. Find the letter of the answer in the string of letters near the bottom of the page and CROSS IT OUT each time it appears. When you finish, write the remaining letters in the rectangle at the bottom of the page. The table below may help you.

<table>
<thead>
<tr>
<th>Unit</th>
<th>Approximate Size</th>

<tr>
<td>1 kilogram (kg)</td>
<td>mass (weight) of a math textbook</td>
</tr>
</tbody>
</table>

I. Choose the more reasonable estimate of weight.

1. a nickel
   - M 5 g  
   - N 5 kg

2. a postage stamp
   - A 60 g  
   - Y 60 mg

3. a bowling ball
   - B 7 kg  
   - K 70 kg

4. a lemon
   - X 12 g  
   - W 120 g

5. a 12-year-old child
   - Z 40 kg  
   - I 4 kg

6. a postcard
   - Q 75 g  
   - G 750 mg

II. Complete each statement.

7. 6.5 g = _________ mg

8. 0.8 g = _________ mg

9. 4,900 mg = _________ g

10. 133 mg = _________ g

11. 7.25 kg = _________ g

12. 60 kg = _________ g

13. 250 g = _________ kg

14. 80,000 g = _________ kg

Answers 7 – 14:

H 490

T 725  
F 2.5  
P 4.9  
S 0.6  
E 0.25

III. Solve.

15. An average orange weighs 270 g. How many kilograms does a bag of 8 oranges weigh?

   Answers 15 – 16:

   T 1.96  
   O 800

16. A vitamin tablet weighs 1.2 g. It contains 150 mg of Vitamin C and 250 mg of B Complex vitamins. How many milligrams of other ingredients are in the tablet?

   F 920  
   R 2.16

Answer to puzzle: B R Y L F E G O I P M C S O D H W T R B G A L O N Z U K V E S J
Why Did the Ice Skater Tell Jokes While Performing?

Do each exercise and find your answer in the set of answers to the right. Write the letter of the answer in each box containing the number of the exercise. If the answer has a circle, shade in each box containing that exercise number.

I. Complete each statement.

1. 8.3 kg = ________ g
2. 830 mg = ________ g
3. 27.5 g = ________ mg
4. 2,750 g = ________ kg
5. 4,000,000 mg = ________ kg
6. 0.66 kL = ________ L
7. 66,000 mL = ________ L
8. 3.09 L = ________ mL
9. 30.9 L = ________ mL
10. 0.04 kL = ________ mL

II. Solve.

11. A jar of sweet pickles contains 650 g of pickles. There are 12 jars in a case. How many kilograms of pickles are in a case? ________ kg

12. A large can of frozen orange juice contains 354 ml. To make orange juice, you add 3 full cans of water. How many liters of orange juice does this make? ________ L

13. A costume designer bought 1.6 kg of colorful sequins. She used 250 g of sequins to make a crown and 200 g to make a cape. How many grams of sequins were left? ________ g

14. Mrs. Sipp has 4.6 L of lemonade to serve her son’s 20 birthday guests. About how many milliliters should she pour into each glass? ________ mL

15. A gasoline can was filled with 17.5 L of gasoline. A lawnmower fuel tank that holds 1.4 L has been filled 8 times from the gasoline can. How much gasoline is left in the can? ________ L

16. ABC Corporation is mailing a report to stockholders. The report includes a cover and 100 sheets of paper. If the cover weighs 0.2 kg and each sheet of paper weighs 5 g, how much does the report weigh? ________ g

10. L 1.606
What Should You Study to Learn How to be a Cowboy?

Cross out the letter next to each correct answer. When you finish, the answer to the title question will remain.

I. Complete each statement.

1. \(4 \text{ h} = \underline{____} \text{ min}\)
2. \(7 \text{ min} = \underline{____} \text{ sec}\)
3. \(2 \text{ h} 30 \text{ min} = \underline{____} \text{ min}\)
4. \(5 \text{ min} 10 \text{ sec} = \underline{____} \text{ sec}\)
5. \(180 \text{ min} = \underline{____} \text{ h}\)
6. \(540 \text{ sec} = \underline{____} \text{ min}\)
7. \(80 \text{ min} = \underline{____} \text{ h} \underline{____} \text{ min}\)
8. \(135 \text{ sec} = \underline{____} \text{ min} \underline{____} \text{ sec}\)
9. \(3 \text{ d} = \underline{____} \text{ h}\)
10. \(3 \text{ d} = \underline{____} \text{ min}\)

II. Add or subtract. Simplify if possible.

11. \(2 \text{ h} 30 \text{ min} + 3 \text{ h} 45 \text{ min}\)
12. \(5 \text{ min} 40 \text{ s} + 8 \text{ min} 50 \text{ s}\)
13. \(7 \text{ h} 8 \text{ min} + 2 \text{ h} 43 \text{ min}\)
14. \(8 \text{ min} 10 \text{ s} - 3 \text{ min} 30 \text{ s}\)
15. \(12 \text{ h} 25 \text{ min} - 5 \text{ h} 45 \text{ min}\)
16. \(32 \text{ min} 50 \text{ s} - 17 \text{ min} 24 \text{ s}\)
17. \(6 \text{ h} 47 \text{ min} + 4 \text{ h} 13 \text{ min}\)
18. \(9 \text{ min} - 5 \text{ min} 32 \text{ s}\)
19. \(-2 \text{ d} 11 \text{ h}\)

III. Solve.

20. It takes 15 h 20 min to travel from Los Angeles to Salt Lake City by train. It takes only 2 h 38 min to fly between the two cities. How much longer does the train take?
What Has Four Legs and Flies?

This title question has TWO different answers. Part I gives you one answer and Part II gives you the other. Follow the directions for each part.

I. Identify each measurement that is marked with a letter. Write each letter in the box that contains the corresponding measurement.

II. For each exercise, measure the line segment to the nearest $\frac{1}{8}$ inch. Write the letter of the exercise in the box containing the measurement.
Why Do Elephants Lift Weights?

Measure each line segment below to the nearest one-eighth inch. Find your answer in the answer column. Write the letter of the exercise in the box containing the number of the answer.

1. 3 \( \frac{7}{8} \) in.
2. 2 \( \frac{7}{8} \) in.
3. \( \frac{7}{8} \) in.
4. 5 \( \frac{1}{4} \) in.
5. 4 \( \frac{1}{4} \) in.
6. 4 \( \frac{3}{8} \) in.
7. 3 \( \frac{1}{8} \) in.
8. 5 \( \frac{1}{8} \) in.
9. 3 \( \frac{5}{8} \) in.
10. \( \frac{3}{4} \) in.
11. 2 \( \frac{1}{2} \) in.
12. 1 \( \frac{5}{8} \) in.
13. 1 \( \frac{3}{8} \) in.
14. 1 \( \frac{3}{4} \) in.
15. 4 \( \frac{1}{2} \) in.
16. 2 \( \frac{5}{8} \) in.
17. 2 in.
18. 4 \( \frac{3}{4} \) in.
19. 3 \( \frac{3}{8} \) in.

TOPIC 2-a: Measuring Line Segments With a Ruler

MIDDLE SCHOOL MATH WITH PIZAZZ! BOOK D
© Creative Publications
Measure with Pleasure

Follow the directions below. When you complete each step, put an \( \times \) in front of it. Measure carefully and you will get the picture!

1. Copy rectangle ABCD on another sheet of paper. The rectangle is 7 in. wide and \( 9 \frac{1}{2} \) in. high.
2. Place your ruler on \( \overline{AB} \). Measure \( 3 \frac{1}{8} \) in. across from Point A. Make a dot to mark this point. Label it Point E.
3. Place your ruler on \( \overline{BC} \). Measure down \( 1 \frac{1}{4} \) in. from Point B. Make a dot to mark this point. Label it Point F.
4. On \( \overline{BC} \), measure down \( 5 \frac{7}{8} \) in. from B. Label this Point G.
5. Point H is on \( \overline{BC} \), \( 7 \frac{3}{8} \) in. from B.
6. Point I is on \( \overline{BC} \), \( 8 \frac{3}{8} \) in. from B.
7. Point J is on \( \overline{AD} \), 7 in. from A. Connect points H and J.
8. Point K is on \( \overline{AD} \), \( 8 \frac{1}{2} \) in. from A. Connect points I and K.
9. Point L is on \( \overline{JH} \), \( 3 \frac{1}{8} \) in. from J. Draw \( \overline{EL} \).
10. Point M is on \( \overline{EL} \), \( 7 \frac{7}{8} \) in. from E. Draw \( \overline{GM} \).
11. Point N is on \( \overline{AD} \), \( 5 \frac{3}{4} \) in. from A. Draw \( \overline{MN} \).
12. Line up your ruler on Points E and F. Mark a point 1 in. from E and label it Point O. Connect points E and O.
13. Point P is on \( \overline{EL} \), \( 5 \frac{5}{8} \) in. from E. Draw \( \overline{OP} \).
14. Point Q is on \( \overline{EL} \), \( 6 \frac{1}{4} \) in. from E. Draw \( \overline{GQ} \).
15. Point R is on \( \overline{EL} \), \( 6 \frac{5}{8} \) in. from E. Draw \( \overline{NR} \).
16. Point S is on \( \overline{NR} \), \( 2 \frac{3}{4} \) in. from N. Draw \( \overline{MS} \).
17. Point T is on \( \overline{KI} \), \( 1 \frac{1}{8} \) in. from K. Draw \( \overline{JT} \).
18. Point U is on \( \overline{KI} \), 6 in. from K. Draw \( \overline{HU} \).
What Is the Title?

TO FIND THE TITLE OF THIS PICTURE:

Do each exercise below. Find your answer in the code and write the letter of the exercise above it. (Each answer appears only once.)

CODED TITLE:

<table>
<thead>

I. Answer each question.

N  How many inches are in 1 foot? _____
E  How many feet are in 1 yard? _____
D  How many inches are in 1 yard? _____

II. Complete each statement.

You are changing each measure to a smaller unit.

| A | 2 ft = _____ in.
| T | 5 ft = _____ in.
| I | 1 ft 6 in. = _____ in.
| D | 8 ft 4 in. = _____ in.
| R | 5 yd = _____ ft
| A | 9 yd 2 ft = _____ ft
| G | 20 yd 1 ft = _____ ft
| S | 2 yd = _____ in.
| N | 3 yd 18 in. = _____ in.

III. Complete each statement.

You are changing each measure to a larger unit.

| D | 48 in. = _____ ft
| A | 19 in. = _____ ft _____ in.
| I | 69 in. = _____ ft _____ in.
| N | 24 ft = _____ yd
| O | 10 ft = _____ yd _____ ft
| D | 35 ft = _____ yd _____ ft
| H | 180 in. = _____ yd
| P | 56 in. = _____ yd _____ in.
| S | 366 in. = _____ yd _____ in.

TOPIC 2-b: Renaming Units of Length

D-18
What Did Airhead Klutz Look For When He First Took Up Waterskiing?

Find each answer in the set of boxes under the exercise. Write the letter of the exercise in the space above the answer.

I. Complete each statement.

1. \(7 \text{ ft} = \underline{\_\_\_\_\_\_\_\_} \text{ in.}\)
2. \(8 \text{ yd} = \underline{\_\_\_\_\_\_\_\_\_\_\_\_}\ \text{ ft}\)
3. \(60 \text{ in.} = \underline{\_\_\_\_\_\_\_\_\_\_\_}\ \text{ ft}\)
4. \(2\frac{1}{2} \text{ ft} = \underline{\_\_\_\_\_\_\_\_}\ \text{ in.}\)
5. \(4 \text{ yd} = \underline{\_\_\_\_\_\_\_\_\_\_\_}\ \text{ in.}\)
6. \(40 \text{ in.} = \underline{\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_}\ \text{ ft} \underline{\_\_\_\_\_}\ \text{ in.}\)
7. \(72 \text{ in.} = \underline{\_\_\_\_\_\_\_\_\_\_\_\_}\ \text{ yd}\)
8. \(10 \text{ ft 3 in.} = \underline{\_\_\_\_\_\_\_\_\_\_\_\_\_}\ \text{ in.}\)
9. \(5 \text{ yd 2 ft} = \underline{\_\_\_\_\_\_\_\_\_\_\_\_}\ \text{ ft}\)
10. \(7 \frac{2}{3} \text{ yd} = \underline{\_\_\_\_\_\_\_\_\_\_\_}\ \text{ ft}\)

K. A baseball diamond is a square with 90 feet between bases. About how many yards does a player run after hitting a home run? \(\underline{\_\_\_\_\_\_\_}\ \text{ yd}\)

II. Add or subtract. Simplify if possible.

G. \(3 \text{ ft 7 in.} + 2 \text{ ft 8 in.}\)

I. \(5 \text{ ft 9 in.} + 8 \text{ ft 10 in.}\)

L. \(13 \text{ ft 2 in.} + 6 \text{ ft 8 in.}\)

N. \(3 \text{ yd 2 ft} + 4 \text{ yd 2 ft}\)

A. \(9 \text{ ft 11 in.} - 4 \text{ ft 6 in.}\)

I. \(7 \text{ ft 4 in.} - 2 \text{ ft 7 in.}\)

T. \(10 \text{ ft 8 in.} - 3 \text{ ft 11 in.}\)

I. \(14 \text{ yd 1 ft} - 8 \text{ yd 2 ft}\)

L. \(12 \text{ ft 6 in.} + 7 \text{ ft 6 in.}\)

B. \(20 \text{ ft} - 5 \text{ ft 8 in.}\)

I. \(9 \text{ yd 2 ft} + 6 \text{ yd 1 ft}\)

H. \(36 \text{ yd} - 28 \text{ yd 1 ft}\)
Why Did the Young Actress Stuff Her Autograph Into Bottles of that Low-Calorie Cola?

Find each answer in the appropriate set of boxes at the bottom of the page. Write the letter of the exercise in the box containing the answer.

I. Complete each statement. You are changing each measure to a smaller unit.

- E 5 gal = _____ qt
- T 9 gal = _____ qt
- O 2 qt = _____ pt
- A 15 qt = _____ pt
- E 1 pt = _____ c
- D 7 pt = _____ c
- S 3 c = _____ fl oz
- T 10 c = _____ fl oz
- E 1 gal 2 qt = _____ qt
- S 6 gal 3 qt = _____ qt
- W 4 pt 1 c = _____ c
- H 1 gal = _____ pt
- E 1 pt = _____ fl oz
- N 1 qt = _____ fl oz

II. Complete each statement. You are changing each measure to a larger unit.

- N 12 qt = _____ gal
- E 40 qt = _____ gal
- S 8 pt = _____ qt
- A 24 pt = _____ qt
- I 10 c = _____ pt
- R 18 c = _____ pt
- E 16 fl oz = _____ c
- M 64 fl oz = _____ c
- I 7 qt = _____ gal _____ qt
- H 30 qt = _____ gal _____ qt
- E 9 pt = _____ qt _____ pt
- L 25 c = _____ pt _____ c
- N 12 fl oz = _____ c _____ fl oz
- T 50 fl oz = _____ c _____ fl oz

Answers for Column I

| 24 | 8 | 20 | 15 | 9 | 30 | 32 | 36 | 6 | 14 | 12 | 80 | 4 | 48 | 27 | 16 | 2 |

Did You Hear About...

Do each exercise and find your answer in the appropriate answer column. Notice the word next to the answer. Write this word in the box containing the letter of the exercise.

I. Complete each statement.

A. 3 gal = _____ qt  
B. 8 pt = _____ c  
C. 5 qt = _____ pt  
D. 6 c = _____ fl oz  
E. 1 gal = _____ qt  
F. 2 1/2 pt = _____ c  
G. 1 qt = _____ c  
H. 1 qt = _____ fl oz  
I. 4 gal 3 qt = _____ qt  
J. 7 qt = _____ pt  
K. 7 qt = _____ c  
L. 7 qt = _____ fl oz  
M. 20 qt = _____ gal  
N. 12 pt = _____ qt  
O. 16 fl oz = _____ c  
P. 36 c = _____ pt  
Q. 8 pt = _____ gal  
R. 9 qt = _____ gal _____ qt  
S. 48 fl oz = _____ pt  
T. 60 c = _____ qt  

II. Solve.

V. Mr. Fizz bought 6 cans of root beer. Each can contained 12 fl oz. How many cups of root beer did he buy? _____ c  
W. A certain paint is sold in both 1-gal cans and 1/qt cans. The gallon can costs $13 and the quart can costs $5. How much do you save per gallon by buying the larger cans? $_____  
X. Mrs. Ramirez bought 2 qt of orange juice. If the juice is served in 6-oz glasses, how many glasses can be completely filled? _____
What Did They Call the Guy Who Made 367 Mistakes While Typing One Page?

Cross out the box containing each correct answer. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

I. Complete each statement.

1. 5 lb = _____ oz
2. 2 lb 12 oz = _____ oz
3. 3 lb 8 oz = _____ oz
4. 10 lb 3 oz = _____ oz
5. ½ lb = _____ oz
6. 3 T = _____ lb
7. 1 T 700 lb = _____ lb
8. 4 ½ T = _____ lb
9. 48 oz = _____ lb
10. 42 oz = _____ lb _____ oz
11. 100 oz = _____ lb _____ oz
12. 10,000 lb = _____ T
13. 5,600 lb = _____ T _____ lb
14. 1 T = _____ oz

II. Solve.

15. How many ounces of meat are used to make a $\frac{1}{4}$-lb hamburger? _____ oz

16. One dozen baseballs were packaged for mailing. Each ball weighed 5 oz and the box weighed 9 oz. Find the total weight of the package in pounds and ounces. _____ lb _____ oz

17. There are 30 students in a math class with an average weight of 92 lb per student.
   A. What is the combined weight of all the students in the class? _____ lb
   B. How much more than a ton is this? _____ lb
Why Couldn’t the Astronaut Make Cinnamon Toast?

Do each exercise and find your answer in the set of answers to the right. Write the letter of the answer in each box containing the number of the exercise. If the answer has a circle, shade in each box containing that exercise number.

I. Complete each statement.

1. 6 gal 1 qt = qt
2. 5 1/2 pt = ________ c
3. 2 lb 6 oz = oz
4. 2 1/4 T = ________ lb
5. 10 c = fl oz
6. 3 qt = ________ fl oz
7. 88 oz = ________ lb ______ oz
8. 100,000 lb = ________ T
9. 15 qt = gal ______ qt
10. 32 fl oz = ________ pt

II. Solve.

11. There are 2 tablespoons in a fluid ounce. How many tablespoons are in a cup? ________ tbs
12. Linda Kuerth set a record by eating 23 frankfurters in 3 min 10 s. If each frankfurter weighed 2 oz, find the total amount she ate in pounds and ounces. ________ lb ______ oz
13. For the big family picnic, Mr. Lincoln rented a huge jug and filled it with 20 gal of lemonade. If each person drank 1 pt, how many people could be served? ________
14. According to one study, the average American teenager eats 1,817 lb of food a year. How much less than a ton is this? ________ lb
15. Apple juice is sold in a 1-gal jug for $3.30. It is also sold in individual 8-oz cartons for 40¢ a carton. How much more per gallon do you pay by buying the individual cartons? $_____
16. In a recent year gold was worth $500 an ounce. If you weighed 100 lb and were “worth your weight in gold,” how much would you be worth? $_____

TOPIC 2-f: Adding and Subtracting Measurements
What Does a Cat Need to Play Baseball?

For each exercise, circle the letter of the correct choice. Write this letter in the box containing the number of the exercise.

1. Which of the following is not a point on $\overline{AC}$?
   - Y B R D V A

2. Which of the following is not a correct name for this line?
   - A $\overrightarrow{PQ}$ L $\overrightarrow{QP}$ G $\overrightarrow{PQ}$

3. Which of the following is not the name of a segment in this figure?
   - O $\overline{RS}$ T $\overline{ST}$ H $\overline{TR}$

4. Which of the following is not the name of a ray in this figure?
   - W $\overrightarrow{EG}$ S $\overrightarrow{FG}$ U $\overrightarrow{FE}$

5. Which of the following is not a correct name for this angle?
   - I $\angle ACB$ Y $\angle CBA$ L $\angle B$

6. Which of the following is not the name of a line in this figure?
   - G $\overrightarrow{ZX}$ R $\overrightarrow{XY}$ K $\overrightarrow{YZ}$

7. Which of the following is a segment that has B as an endpoint?
   - N $\overline{CD}$ C $\overline{AC}$ T $\overline{CB}$

8. Which of the following is not the name of a ray in this figure?
   - H $\overrightarrow{MO}$ S $\overrightarrow{LM}$ P $\overrightarrow{KO}$

9. Which of the following is not a correct name for an angle in this figure?
   - M $\angle H$ A $\angle LGHF$ D $\angle EHG$
I. Complete each statement.

- The figure formed by two rays from the same endpoint is an angle.
- The intersection of the two sides of an angle is called its vertex.
- The vertex of $\angle COD$ in the drawing above is point $O$.
- The instrument used to measure angles is called a protractor.
- The basic unit in which angles are measured is the degree.
- $\angle LOA$ has a measure of $90^\circ$ and is called a right angle.
- An angle whose measure is between $0^\circ$ and $90^\circ$ is an acute angle.
- Two acute angles in the figure are $\angle BOC$ and $\angle AOD$.
- An angle whose measure is between $90^\circ$ and $180^\circ$ is an obtuse angle.
- An obtuse angle in the figure is $\angle DOA$.

II. Give the measure of each angle.

- $\angle RQS$.
- $\angle LRQT$.
- $\angle RQU$.
- $\angle RQV$.
- $\angle LRQW$.
- $\angle LXQW$.
- $\angle LXQT$.
- $\angle UQV$.
Why Did the Brontosaurus Need Band-Aids?

For each exercise, circle the letter of the best estimate. Write this letter in the box containing the number of the exercise.

1. \( m\angle P \) is about
   - B 35°  S 70°

2. \( m\angle X \) is about
   - T 65°  O 30°

3. \( m\angle V \) is about
   - E 140°  J 95°

4. \( m\angle G \) is about
   - L 55°  I 25°

5. \( m\angle K \) is about
   - O 50°  F 80°

6. \( m\angle W \) is about
   - R 155°  C 110°

7. \( m\angle BAC \) is about
   - S 40°  P 15°

8. \( m\angle CAD \) is about
   - U 65°  I 90°

9. \( m\angle BAD \) is about
   - G 100°  O 130°

10. \( m\angle POR \) is about
    - M 160°  F 120°

11. \( m\angle POQ \) is about
    - V 40°  N 15°

12. \( m\angle QOR \) is about
    - R 105°  B 140°

13. \( m\angle X \) is about
    - P 35°  H 60°

14. \( m\angle Y \) is about
    - S 45°  L 25°

15. \( m\angle Z \) is about
    - D 75°  G 40°

TOPIC 3-c: Estimating Angle Measures
ABOVE ARE THE TITLES OF THREE "BOOKS NEVER WRITTEN." TO DECODE THE NAMES OF THEIR AUTHORS:

Measure each angle below and find your answer in the code. Each time the answer appears in the code, write the vertex letter of that angle above it.
What Happens When Cupid Shoots an Arrow?

Use a protractor to construct the angles below. Each side you draw will pass through a number. Write the vertex letter of the angle in the box containing this number.
Why Is a Party Like Pouring Oil Into a Car?

Do each exercise and find your answer at the bottom of the page. Write the letter of the exercise in the box above or below the answer.

I. Find the measure of the angle that is complementary to the angle having the measure given.

E 20°  H 67°  S 14°  E 81°  T 45°

II. Find the measure of the angle that is supplementary to the angle having the measure given.

R 120°  E 56°  I 29°  U 162°  H 83°

III. Find the angle measure that is not given.

N  E  T

L  W  F

E  B  N

151°  76°  64°  56°  56°  62°  45°  124°  145°  17°  70°  133°  9°

43°  125°  97°  60°  36°  23°  37°  18°  30°  108°  113°
How Did the Judge Find Out About the Rotten Milk?

Do each exercise and find your answer in the Code Key. Notice the letter next to the answer. Write this letter in the box containing the number for the exercise.

I. Complete each statement.

1. Two angles are complementary if the sum of their measures is _____.
2. Two angles are supplementary if the sum of their measures is _____.
3. The complement of a 30° angle has a measure of _____.
4. The supplement of a 65° angle has a measure of _____.

II. Find the measure of each numbered angle.

What Is The Biggest Problem of Miners?

Circle the number-letter pair of each TRUE statement. For these pairs, write the letter in the matching numbered box at the right.

I. Use the figure below, in which \( EF \parallel BH \). You should find 11 true statements.

7-E \( \overleftrightarrow{EF} \) intersects \( \overrightarrow{AD} \) at C.
11-O \( \overline{EB} \perp \overline{AC} \)
2-H \( \overrightarrow{FC} \parallel \overrightarrow{HG} \)
17-E \( \overrightarrow{HC} \perp \overrightarrow{DB} \)
1-T \( \overrightarrow{EB} \parallel \overrightarrow{CH} \)
3-A \( \overrightarrow{BG} \perp \overrightarrow{CH} \)
16-S \( \overrightarrow{CF} \parallel \overrightarrow{BE} \)
12-A \(" \angle EBC \) is a right angle.
18-G \(" \angle LDCE \) is a right angle.
3-E \( \angle HCB = 90^\circ \).
8-T \(" \angle FCH \) is an acute angle.
16-E \(" \angle LECH \) is an obtuse angle.
14-P \(" \angle ABE \) is an acute angle.
4-Y Perpendicular lines intersect to form right angles.
18-T Parallel lines never intersect.
6-L \( \angle DCH = \angle EBH \)

II. Use the figure above. You should find 4 true statements.

13-L 5th Street is parallel to 6th Street.
6-G 6th Street is perpendicular to Elm Avenue.
10-S Elm Avenue is parallel to Disk Drive.
15-F 4th Street and Oak Avenue intersect to form right angles.
9-N Elm Avenue is perpendicular to Oak Avenue.
10-C Elm Avenue is parallel to Oak Avenue.
Why Couldn't the Two Elephants Go Swimming Together?

Give the measure of each numbered angle. Find your answer in the Code Key and notice the letter next to it. Write this letter in the box containing the number of the angle.

(Assume that lines in each figure that do not intersect are parallel.)

TOPIC 3-I: Quadrilaterals
Why Was Cinderella Kicked Off the Baseball Team?

For each exercise, circle the letter of each figure that belongs in the category named. Arrange these letters to form a word. Then write this word on the line next to the name of the category.

(You may assume the following: sides that appear parallel are parallel; sides that appear perpendicular are perpendicular; sides that appear congruent are congruent.)

1. quadrilaterals: ____________
   E W S T H

2. parallelograms: ____________
   P A I N C R

3. rectangles: ____________
   O T A Y A W

4. rhombuses: ____________
   S M O E F R

5. squares: ____________
   A E B T H S

6. trapezoids: ____________
   A G L B I L
Why Didn't the Snobbish Potatoes Want Their Daughter to Marry a News Broadcaster?

Under each figure, circle the number-letter combination next to each word that correctly names the figure. Write the letter in the matching numbered box at the bottom of the page.

1. 5-A parallelogram 16-0 rectangle 19-F square
2. 25-E parallelogram 13-1 rectangle 4-D rhombus
3. 9-U quadrilateral 21-F parallelogram 1-H trapezoid
4. 20-N parallelogram 11-T rectangle 23-A square
5. 2-E quadrilateral 24-V parallelogram 8-P rhombus
6. 19-0 parallelogram 15-L rectangle 6-S rhombus
7. 13-A quadrilateral 26-R parallelogram 7-N trapezoid
8. 17-M rectangle 10-P square 14-S trapezoid
9. 21-E parallelogram 18-1 rhombus 8-J trapezoid
10. 4-W quadrilateral 12-0 parallelogram 24-N trapezoid
11. 22-T quadrilateral 15-C rhombus 3-B square
12. 10-S rectangle 18-M rhombus 24-T square
Why Do Ants Visit the Zoo on Cold Days?

Write the word missing from each statement in the boxes next to the statement. Notice which letters are in numbered boxes. Write each of these letters in the matching numbered box at the bottom of the page.

A triangle is a _______ with three sides and three angles.

A polygon with four sides and four angles is a _______

A polygon with five sides and five angles is a _______

A polygon with six sides and six angles is a _______

An octagon is a polygon with eight sides and eight _______

A polygon with ten sides and ten angles is a _______

In the set of figures above, Figure A is a _______

Figure B is an _______

Figure C is a _______

Figure D is a _______

The point of intersection of two sides of a polygon is called a _______

A line segment (not a side) connecting two vertices of a polygon is called a _______

A polygon with all sides the same length and all angles the same measure is called a _______ polygon.
Why Couldn't Orgo Buy a Round Trip Ticket?

Follow the directions for each section. Each exercise will give you a number-letter pair. Write the letter in the matching numbered box at the bottom of the page.

I. Find each pair of congruent figures. Use the number from one figure and the letter from the other.

II. Complete each statement, then find your answer in the answer column. Use the number of the exercise and the letter of the answer.

AABC \cong AEDF

What Did the Waitress Mean When She Yelled to the Cook: “1 + 1”?

Fill in each blank with one of the answers at the bottom of the page. Then write the letter of the exercise above its correct answer.

The figure at the right is a circle with center at \( O \).

\( E \) The points on a circle are all the same distance from the ________

\( S \) A line segment from the center to any point on the circle is a ________

\( U \) A line segment with both endpoints on the circle is a ________

\( I \) A chord that passes through the center of a circle is a ________

\( O \) A diameter of the circle in the drawing above is the segment ________.

\( E \) Which of the following is not a radius: \( \overline{OA}, \overline{OD}, \) or \( \overline{BC} \)? ________

\( S \) Which of the following is not a chord: \( \overline{BC}, \overline{OA}, \) or \( \overline{AC} \)? ________

\( N \) Part of a circle, such as between points \( A \) and \( C \), is an ________

\( E \) An angle whose vertex is at the center of a circle is a ________

\( P \) Which of the following is not a central angle: \( \angle AOD, \angle COD, \) or \( \angle BCA \)? ________

\( S \) Points \( A, B, C, \) and \( D \) are all the same ________ from point \( O \).

\( O \) If the length of \( \overline{AC} \) is 20 cm, then the length of \( \overline{OC} \) is ________

\( N \) If the length of \( \overline{OA} \) is 20 cm, then the length of \( \overline{OD} \) is ________

\( W \) If the length of \( \overline{OD} \) is 20 cm, then the length of \( \overline{AC} \) is ________

\( L \) The length of a radius is ________ the length of a diameter.

\( T \) The set of points in a plane at a fixed distance from a given point is a ________
What Did the Secretary Say to Her Boy Friend?

For each exercise, circle the letter of each figure that is divided by a line of symmetry. Arrange these letters to form a word. Then write this word on the line next to the exercise number.

1. 

2. 

3. 

4. 

5. 

TOPIC 3-q: Lines of Symmetry
What Did the Taxi Driver Say About His Daughter?

Write the name that best describes each space figure. Then find your answer in the answer column. Write the letter of the answer in the box containing the number of the exercise.

1. circle
2. cylinder
3. cone
4. cube
5. triangular prism
6. rectangular prism
7. pentagonal prism
8. hexagonal pyramid
9. triangular pyramid
10. hexagonal prism
11. cone
12. rectangular prism

Answers:
- 6: U
- 4: T
- 9: R
- 2: T
- 1: E
- 15: M
- 7: O
- 10: U
- 12: A
- 8: E
- 3: Y
Why Did the River Guide Carry a Rifle?

Find the PERIMETER of each figure. Cross out the box containing each correct answer. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

1. 13 cm 10 cm 18 cm
2. 9 ft 14 ft
3. 3.5 m 5 m 8.5 m
4. 2.0 km 2.9 km 4 km 2.5 km 1.6 km
5. 0.9 m 0.9 m 1.8 m
6. 24 in. 24 in. 24 in. 24 in.

Find the perimeter of each rectangle.

7. 60 cm 40 cm
8. 12.5 ft 5 ft
9. 15 m 8.2 m
10. \( \ell = 48 \text{ mm} \)

I. Find the perimeter of each figure.

O Triangle with sides of 8.2 cm, 3.9 cm, and 4.5 cm
B Rectangle with sides of 22 in. and 28 in.
G Square with sides of 16.4 m
E Parallelogram with sides of 40 cm and 75 cm
A Regular decagon with sides of 0.63 km

I. Solve.

L The width of a large American flag is 8 ft. Its length is 5 ft more than its width. Find its perimeter.
M The perimeter of a square window is 360 cm. Find the length of one side.
R A pennant is shaped like an isosceles triangle. The short side is 14 in. long and is half the length of each longer side. Find the perimeter of the pennant.

N The width of a rectangular poster is 16 in. Its length is twice its width. Find its perimeter.
F The perimeter of a triangle is 38 ft. One side is 14 ft long. Another side is 9 ft long. How long is the third side?
S The longest side of a triangular sail is 9 m long. The second side is 1.5 m shorter than the longest side. The third side is half the length of the longest side. What is the perimeter?
Why Did the Piano Player Bang Her Head Against the Keyboard?

Find the circumference ($C$) of each circle, given the diameter ($d$) or radius ($r$). Use 3.14 for $\pi$. Draw a straight line connecting the square by the exercise to the square by its answer. The line will cross a number and a letter. Write the letter in the matching numbered box at the bottom of the page.

1. $d = 3$ cm
2. $d = 8$ in.
3. $d = 7$ cm
4. $d = 40$ in.
5. $d = 9.2$ cm
6. $d = 1.5$ in.
7. $d = 600$ m
8. $d = 23$ in.
9. $d = 10$ cm
10. $r = 1$ in.
11. $r = 6$ cm
12. $r = 15$ in.
13. $r = 2.2$ cm
14. $r = 48$ in.

17. $r = 2.5$ cm
18. $r = 50$ m

$\bullet$ $C = 125.6$ in.
$\bullet$ $C = 31.4$ cm
$\bullet$ $C = 94.2$ in.
$\bullet$ $C = 9.42$ cm
$\bullet$ $C = 72.22$ in.
$\bullet$ $C = 301.44$ in.
$\bullet$ $C = 25.12$ in.
$\bullet$ $C = 15.7$ in.
$\bullet$ $C = 28.888$ cm
$\bullet$ $C = 13.816$ cm
$\bullet$ $C = 15.7$ cm
$\bullet$ $C = 21.98$ cm
$\bullet$ $C = 6.28$ in.
$\bullet$ $C = 314$ m
$\bullet$ $C = 4.71$ in.
$\bullet$ $C = 37.68$ cm
$\bullet$ $C = 24.492$ cm
$\bullet$ $C = 1,884$ m

TOPIC 4-b: Circumference
Did You Hear About...

Find each answer in the appropriate answer column and notice the word under it. Write this word in the box containing the letter of the exercise.

I. Find the circumference of each circle. Use 3.14 for $\pi$.

A. $4 \text{ cm}$
B. $90 \text{ m}$
C. $3 \text{ ft}$
D. $2.1 \text{ m}$

E. $d = 20 \text{ ft}$
F. $d = 3.8 \text{ cm}$
G. $r = 250 \text{ m}$
H. $r = 5 \text{ cm}$

II. Find the circumference of each circle. Use $\frac{22}{7}$ for $\pi$.

I. $d = 14 \text{ ft}$
J. $d = 28 \text{ in.}$
K. $d = 49 \text{ mm}$
L. $d = 10\frac{1}{2} \text{ ft}$

M. $r = 21 \text{ mm}$
N. $r = 3\frac{1}{2} \text{ in.}$
O. $r = 105 \text{ mm}$
P. $r = \frac{3}{4} \text{ in.}$

III. Solve. Use 3.14 for $\pi$.

Q. The wheels on a bicycle have a diameter of 27 in. How far does the bicycle travel with each turn of the wheels?
R. The minute hand of a large clock is 6 ft long. How far does the point of the hand move in one hour?
What Does a Tuba Call Its Father?

Give the number of square units in each figure. Find your answer and cross out the letters above it. When you finish, the answer to the title question will remain.
What Did the Baseball Coach Look For in Space?

Measure the length and width of each rectangle to the nearest cm. Then compute both the PERIMETER and AREA. Find both answers in the rocket and cross out the letter next to each. (For answers that appear more than once in the rocket, it doesn't matter which one you cross out.)

When you finish, the answer to the title question will remain.
Why Do Elephants Have Ivory Tusks?

Do each exercise and find your answer in the answer columns. Write the letter of the answer in each box containing the number of the exercise.

I. Find the area of each figure.

1. 6 m
   4 m

2. 6 m
   4 m
   2 m
   2 m

3. 6 m
   4 m
   3 m

   27 ft
   27 ft
   30 ft

III. Solve.

10. A bedroom is 15 ft long and 12 ft wide. How much will it cost to carpet the room if carpeting costs $22 per square yard? (1 yd = 3 ft)

11. A rose garden in the city park is rectangular and is 9 m wide. If the area of the rectangle is 144 m², what is the length of the garden?

ANSWERS

A 219 ft²
L 20 m²
I 135 cm²
B 165 ft²
C 21 m²
N $440
T 68 in.²
F $520
S 171 ft²
G 124 cm²
E 24 m²
P 19 m
U 251 ft²
V 108 in.²
R 16 m
W 119 in.²
O 18 m²

TOPIC 4-c: Area of Rectangles

D-52  MIDDLE SCHOOL MATH WITH PIZZAZZ! BOOK D
© Creative Publications
**How was the Wooden Marionette Related to the Wooden Diving Board?**

Use a calculator to solve each problem (round decimal answers to the nearest tenth). Find your answer in the answer column and notice the two letters next to it. Write these letters in the spaces over the exercise number at the bottom of the page.

WORLD RECORD: The largest jigsaw puzzle ever made was 85 by 55 ft and had 15,520 pieces. It was constructed by the United Way in Keene, New Hampshire.

1. What was the area of the puzzle in ft²?
2. What was the area of the puzzle in in.²?
3. What was the average size of each piece?

WORLD RECORD: The world’s largest quilt, designed by A. Platteau, measures 69.6 by 99.5 ft. It was made from 16,140 equal-sized squares sewn together.

4. What is the area of the quilt in ft²?
5. What is the area of the quilt in in.²?
6. What is the area of each square?

WORLD RECORD: The world’s longest buffet table was 3,304.8 ft long and 8.2 ft wide. On June 19, 1982, approximately 4,000 people, including HM The King of Sweden, were seated at the table.

7. What was the area of the table?
8. What was the perimeter of the table?
9. If 4,000 people were equally spaced around the perimeter of the table, how far apart were they sitting?

WORLD RECORD: The largest American flag ever made was first displayed on March 22, 1980, and measures 411 by 210 ft.

10. What is the area of the flag in ft²?
11. What is the area of the flag in yd²?
12. The fabric used for the flag weighs about 1.6 lb per yd². About how much does the flag weigh?
What Happened to Mr. Meter When Mrs. Meter’s Mother Flew in for a Visit?

Cross out the box containing each correct answer. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

I. Find the PERIMETER and the AREA of each parallelogram.

1. 5 in. 4 in. 8 in. 2. 16 m 15 m 12 m 3. 3.6 cm 3.2 cm 5.1 cm

4. 90 ft 100 ft 5. 6.5 cm 4.2 cm 9.3 cm

II. Solve.

7. The base of a parallelogram is 10 in. The height is 2 in. more than half the base. Find the area.

8. The height of a parallelogram is 4.5 cm. The base is twice the height. What is the area?

9. The area of a parallelogram is 60 ft². The height is 5 ft. How long is the base?

10. The area of a parallelogram is 375 cm². The base is 25 cm. Find the height.

TOPIC 4-e: Area of Parallelograms
1. "I hate playing tic-tac-toe," Tom said

2. "I wish I were six feet tall," Tom said

3. "I just flew in from the coast," Tom said

Find the area of each triangle, then find your answer in the answer column. Write the letter of the answer in each box containing the number of the exercise.

13. A triangular sail has a base of 5 m and a height of 10 m. If canvas costs $18 a square meter, find the cost of canvas to make the sail.

14. A square dinner napkin 8 in. on each side is folded along its diagonal. Find the area of the folded napkin.
Find the AREA and the PERIMETER of each triangle below. Look for both answers in the rectangle. Shade in each area containing a correct answer.
Why Was Igor Unhappy About His Spelling Test Even Though He Got Everything Right?

Give both the perimeter and area of each figure. Find each answer in the appropriate answer column. Fill in the correct unit of measure for each answer you choose, then circle the number-letter next to it. Write the letter in the matching numbered box at the bottom of the page.

What Game Did Tarzan Like to Play?

Do each exercise below. Find your answer in the answer columns and notice the letter next to it. Look for this letter in the string of letters near the bottom of the page and CROSS IT OUT each time it appears. When you finish, write the remaining letters in the rectangle at the bottom of the page.

I. Find the area of each trapezoid.

1. \[ \text{Area} = \frac{1}{2} \times (b_1 + b_2) \times h \]

2. \[ \text{Area} = \frac{1}{2} \times (9 + 16) \times 6 \]

3. \[ \text{Area} = \frac{1}{2} \times (40 + 50) \times 20 \]

4. \[ \text{Area} = \frac{1}{2} \times (1.4 + 3.2) \times 1.6 \]

5. \[ \text{Area} = \frac{1}{2} \times (15 + 7) \times 15 \]

6. \[ \text{Area} = \frac{1}{2} \times (2.5 + 1.5) \times 2.8 \]

7. \[ b_1 = 11 \text{ in.} \]
   \[ b_2 = 9 \text{ in.} \]
   \[ h = 8 \text{ in.} \]

8. \[ b_1 = 3.4 \text{ m} \]
   \[ b_2 = 6.4 \text{ m} \]
   \[ h = 5.0 \text{ m} \]

9. \[ b_1 = 70 \text{ cm} \]
   \[ b_2 = 30 \text{ cm} \]
   \[ h = 25 \text{ cm} \]

II. An artist designed a base for one of his sculptures with the dimensions shown. The top and bottom are rectangles. The sides are isosceles trapezoids.

10. Find the area of the front face (20 cm base).

11. Find the area of the side face (12 cm base).

12. Find the area of the top.

Why Is a Mathematician Like an Airline?

Round each answer to the nearest hundredth (if necessary) and find it in the appropriate answer column. Use 3.14 for π. Fill in the correct unit of measure for each answer you choose. Write the letter of the exercise in the box containing the number of the answer.

1. A circle has a radius of 12 in. Find:
   - E) The diameter of the circle.
   - H) The circumference of the circle.
   - T) The area of the circle.

2. A circle has a radius of 4.4 cm. Find:
   - S) The diameter of the circle.
   - Y) The circumference of the circle.
   - H) The area of the circle.

3. A circle has a diameter of 60 m. Find:
   - I) The radius of the circle.
   - O) The circumference of the circle.
   - T) The area of the circle.

4. A circle has a diameter of 1.8 km. Find:
   - O) The radius of the circle.
   - E) The circumference of the circle.
   - U) The area of the circle.

5. Solve.
   - B) Jack's cow is tied to a beanstalk with a piece of rope that is 15 ft long. What is the area of the circle in which the cow can graze?
   - T) A round game table has a diameter of 1 m. How much plastic laminate is needed to cover the top of this table?
   - S) The diameter of the earth at the equator is about 8,000 mi. Based on this figure, how far is it around the earth?
   - P) Radio station KROQ broadcasts in all directions to a distance of 40 mi. How many square miles are in the station’s broadcast area?
   - L) WORLD RECORD: The world's largest Ferris Wheel was built in London in 1897. The wheel had a radius of 150 ft. How far would you travel in one turn of this wheel?

D-61 TOCIP 4-j: Review: Circumference and Area of Circles
How Do You Get a One-Armed Monkey Down From a Coconut Tree?

Solve each problem. Use 3.14 for \( \pi \). Find your answer and cross out the letter next to it. When you finish, the answer to the title question will remain.

1. Find the diameter of a circle if the circumference is 8 cm. Round to the nearest tenth.

2. Find the diameter of a circle if the circumference is 24.5 m. Round to the nearest tenth.

3. The largest living thing on earth is a California sequoia tree named the “General Sherman.” The circumference of its trunk is about 82 ft. Find the diameter of the trunk to the nearest whole number.

4. A revolving water sprinkler sprays water in all directions to a distance of 25 ft. What area does it cover? Round to the nearest 10 ft\(^2\).

5. Pizza Mind Pizza sells a large pizza with a diameter of 14 in. and a medium pizza with a diameter of 11 in. Find the following to the nearest whole number:
   A. The area of the large pizza.
   B. The area of the medium pizza.
   C. How much larger is the large pizza?

6. Nick Claus plans to have a model train running in a circle around his holiday tree. How many feet of track will he need if the diameter of the circle is 9.5 ft? Round to the nearest whole number.

7. A record has a radius of 15 cm. The label has a radius of 6 cm. Find the following to the nearest tenth:
   A. The area of the record (including the label).
   B. The area of the label.
   C. The area of the record that is not covered by the label.

8. The diameter of a basketball hoop is 18 in. The circumference of a basketball is 30 in.
   A. Find the diameter of the basketball. Round to the nearest tenth.
   B. How much less is the diameter of the basketball than the diameter of the hoop?

9. A circle is cut out of a piece of plywood that is 10 in. square. The scraps are thrown away.
   A. Find the area of the circle.
   B. How many square inches of plywood are thrown away?
When Is a Chair Like the Fabric Used to Make It?

Write the correct formula to use in solving each problem. Find your answer in the Code Key and notice the letter next to it. Write this letter in the box containing the number of the problem.

1. A botanical garden was designed in the shape of a pentagon. How many meters of fencing are needed to go around the garden?

2. How many square feet of wallpaper are needed to cover a wall 8 ft high by 15 ft wide?

3. The diameter of a circular running track is 140 yd. How far would you run in one lap?

4. How much weather stripping is needed to go around a square window measuring 42 in. on a side?

5. A dangerous criminal has escaped from prison. The police believe he could not have traveled more than 10 mi in any direction from the prison. How many square miles must be searched?

6. How much lace edging is needed to go around a rectangular tablecloth measuring 52 in. by 70 in.?

7. How many tiles are needed to cover a square patio measuring 18 ft on a side if each tile covers 1 sq ft?

8. The orbit of the earth around the sun is approximately a circle with a radius of 93,000,000 mi. How far do we travel in one orbit around the sun?

9. How much felt is needed to make this banner?

10. If each bag of fertilizer covers 2,000 sq ft, how many bags are needed to fertilize a rectangular lawn measuring 100 ft by 160 ft?

11. A lighthouse beacon can be seen 24 mi in all directions. What is the area over which the beacon can be seen?

12. Popeye put colorful plastic tape around the edge of a triangular sail. The sail had sides of 10 ft, 15 ft, and 18 ft. How many feet of tape did he use?
What Happened to Zelda After She Swallowed Two Nickels, Three Dimes, and a Quarter?

Give the SURFACE AREA of each prism. Find your answer in the answer columns and notice the two letters next to it. Write these letters in the spaces over the exercise number at the bottom of the page.

1. A rectangular storage box is 12 in. wide, 15 in. long, and 9 in. high. How many square inches of colored paper are needed to cover the surface of the box?

2. A teacher made a pair of foam dice to use in math games. Each cube measured 10 in. on a side. How many square inches of fabric were needed to cover the two cubes?
What Is Cold And Comes In Cans?

Find the surface area of each figure. Cross out the box containing each correct answer. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

D-65 TOPIC 5-b: Surface Area of Prisms and Pyramids
Why Did Humpty Dumpty Have a Great Fall?

Do each exercise and find your answer in the answer column. Write the letter of the answer in each box containing the number of the exercise. Use 3.14 for π.

Find the lateral area and the total surface area of each cylinder.

1. lateral area: ________
   total area: ________

2. lateral area: ________
   total area: ________

3. lateral area: ________
   total area: ________

4. lateral area: ________
   total area: ________

5. lateral area: ________
   total area: ________

6. lateral area: ________
   total area: ________

II. Find the total surface area of each cylinder.

9. \( r = 3 \text{ cm} \)
   \( h = 10 \text{ cm} \)

10. \( r = 8 \text{ in.} \)
    \( h = 8 \text{ in.} \)

11. \( d = 10.8 \text{ m} \)
    \( h = 2.6 \text{ m} \)

III. Solve.

12. A can of tomato juice is a cylinder with a radius of 7.5 cm and a height of 20 cm. What is the area of the label around the can?

13. A steel oil tank is a cylinder with a diameter of 12 ft and a height of 18 ft. How many square feet of steel were needed to make the tank?
**Mystery:** What happened when a 6-year old, a 5-year old, a 4-year old, a 3-year old, and a 2-year old joined to form a basketball team?

Find the volume of each prism in cubic units. Write the letter of the exercise in the box containing the answer.

What Movie Is about a Kid Who Ran Away from Home with His Bicycle?

Find each answer in the answer columns and notice the two letters next to it. Write these letters in the spaces over the exercise number at the bottom of the page.

I. Find the volume of each rectangular prism.

1. 12 in. 9 in.
2. 2 m 1.4 m
3. 3.8 cm 5.2 cm

II. Solve.

4. A classroom is 26 ft wide, 32 ft long, and 9 ft high. What is the volume of the room in cubic feet?
5. A swimming pool is 20.6 m long, 8.5 m wide, and has an average water depth of 1.7 m. Find the volume of water needed to fill the pool.
6. If all the gold that has been produced in the last 500 years could be melted to form a single cube, each side would measure about 16 m. How many cubic meters of gold is this?
7. A refrigerator is 3 ft wide, 2.5 ft deep, and 6 ft high. The walls and other parts of the refrigerator take up 20 ft³. How many cubic feet are left for food?
8. Krispy Kritters Cereal used to come in a box with a volume of 2,850 cm³. However, The Krispy Kritters Co. designed a new larger box 22.5 cm wide, 6.2 cm deep, and 30 cm high. How many more cubic centimeters will the new box hold than the old box?
9. An aquarium weighs 22.5 lb when empty. The aquarium is 30 in. long, 14 in. wide, and is filled with water to a depth of 18 in. Water weighs 0.036 pound per cubic inch. How much does the aquarium weigh when it is full of water?

ANSWERS

RU 985 cm³  ST 6,118 ft³  WI 4,096 m³  LA 314.56 lb  TH 864 in.³
NN 297.67 m³  CH 53,352 cm³  IN 23.5 ft³  GO 1,335 cm³  LE 311.27 m³
WI 294.66 lb  ES 25 ft³  NE 9.8 m³  PA 3,986 m³  TH 7,488 ft³

8 2 6 1 4 7 3 9 5
What Is Big, Gray, and Lives in California?

Find the volume of each prism. Write the letter of the exercise in the box above the answer at the bottom of the page.

A

\[
\text{Volume} = \frac{1}{2} \times \text{base} \times \text{height}
\]

\[
\text{Volume} = \frac{1}{2} \times 5.8 \text{ cm} \times 4 \text{ cm} = 11.6 \text{ cm}^2
\]

B

\[
\text{Volume} = \frac{1}{2} \times \text{base} \times \text{height}
\]

\[
\text{Volume} = \frac{1}{2} \times 7.5 \text{ m} \times 5 \text{ in} = 18.75 \text{ m} \times \text{in}
\]

\[
\text{Volume} = \frac{1}{2} \times 7.5 \text{ m} \times 5 \text{ in} = 18.75 \text{ m} \times \text{in} = 19.7 \text{ cm}^2
\]

C

\[
\text{Volume} = \frac{1}{2} \times \text{base} \times \text{height}
\]

\[
\text{Volume} = \frac{1}{2} \times 6.4 \text{ cm} \times 3 \text{ cm} = 9.6 \text{ cm}^2
\]

D

\[
\text{Volume} = \frac{1}{2} \times \text{base} \times \text{height}
\]

\[
\text{Volume} = \frac{1}{2} \times 6.2 \text{ cm} \times 9.6 \text{ cm} = 29.52 \text{ cm}^2
\]

E

\[
\text{Volume} = \frac{1}{2} \times \text{base} \times \text{height}
\]

\[
\text{Volume} = \frac{1}{2} \times 8 \text{ in} \times 25 \text{ in} = 100 \text{ in}^2
\]

F

\[
\text{Volume} = \frac{1}{2} \times \text{base} \times \text{height}
\]

\[
\text{Volume} = \frac{1}{2} \times 30 \text{ in} \times 20 \text{ in} = 300 \text{ in}^2
\]

G

\[
\text{Volume} = \frac{1}{2} \times \text{base} \times \text{height}
\]

\[
\text{Volume} = \frac{1}{2} \times 30 \text{ in} \times 20 \text{ in} = 300 \text{ in}^2
\]

H

\[
\text{Volume} = \frac{1}{2} \times \text{base} \times \text{height}
\]

\[
\text{Volume} = \frac{1}{2} \times 8.5 \text{ in} \times 6 \text{ in} = 25.5 \text{ in}^2
\]

d 25 \text{ in.}

d 12 \text{ cm}

TOPIC 5-f: Volume of Prisms
TRIVIA TEST

1. What Is the Best Way to Paint a Rabbit?
   4 7 2 8 8 3 11 5 10 1 11 3 6

2. What Candy Do Kids Eat on the Playground?
   11 5 9 5 10 10 1 7 5 9 5 10

Do each exercise and find your answer in the answer column. Write the letter of the answer above the exercise number each time it appears in the code. Use 3.14 for $\pi$.

I. Find the volume of each cylinder.

1. $9 \text{ cm}$
   $B = 75 \text{ cm}^2$

2. $3.5 \text{ m}$
   $B = 4.4 \text{ m}^2$

3. $3 \text{ cm}$
   $5 \text{ cm}$

4. $6 \text{ in.}$
   $20 \text{ in.}$

5. $10 \text{ m}$
   $25 \text{ m}$

6. $7 \text{ cm}$
   $5.5 \text{ cm}$

7. $r = 8 \text{ in.}$
   $h = 3 \text{ in.}$

8. $r = 2.5 \text{ mm}$
   $h = 60 \text{ mm}$

9. $d = 10 \text{ m}$
   $h = 7.2 \text{ m}$

II. Solve.

10. Shawn is making a candle using a cylindrical mold with a radius of 2 cm and a height of 30 cm. How many cubic centimeters of wax are needed for the candle?

11. A mug in the shape of a cylinder has a base with a radius of 4 cm. How many milliliters of liquid does it hold if filled to a height of 9 cm? (Hint: 1 cm$^3$ holds 1 mL.)

TOPIC 5-g: Volume of Cylinders

Answers

M 814.13 cm$^3$
C 565.2 m$^3$
N 381.36 mL
A 141.3 cm$^3$
B 14.8 m$^3$
I 602.88 in.$^3$
P 675 cm$^3$
U 7,490 m$^3$
H 1,177.5 mm$^3$
R 452.16 mL
W 2,260.8 in.$^3$
Y 382.8 cm$^3$
T 15.4 m$^3$
O 846.23 cm$^3$
J 717.8 in.$^3$
S 376.8 cm$^3$
G 1,224.5 mm$^3$
E 7,850 m$^3$
D 614.2 m$^3$

Why Did the Elephant Paint His Toenails Red, Green, Yellow, Blue, and Purple?

Find each answer in the appropriate set of boxes at the bottom of the page. Write the letter of the exercise in the box containing the answer.

I. Find the length of one side (s) of each square.

- Area 25 m²
  - s = ____ m
- Area 64 cm²
  - s = ____ cm
- Area 400 ft²
  - s = ____ ft

II. Find the square root.

- S \( \sqrt{49} \)
- E \( \sqrt{36} \)
- C \( \sqrt{900} \)
- D \( \sqrt{4} \)
- H \( \sqrt{2,500} \)
- I \( \sqrt{100} \)
- O \( \sqrt{81} \)
- L \( \sqrt{16} \)
- J \( \sqrt{1} \)

III. Simplify.

- E \( 15^2 \)
- H \( 11^2 \)
- A \( \sqrt{16 + \sqrt{9}} \)
- E \( \sqrt{36 + 64} \)
- N \( \sqrt{16 + 9} \)
- T \( \sqrt{36 + 64} \)
- L \( \sqrt{0.25} \)
- B \( \sqrt{0.81} \)
- J \( \sqrt{0.01} \)

TOPIC 6-a: Squares and Square Roots
Why Do Adults Complain So Much?

Find the length of the hypotenuse of each right triangle below. Find your answer in the answer column. Write the letter of the answer in the box containing the number of the exercise.

1. \( \sqrt{3^2 + 4^2} = \sqrt{9 + 16} = \sqrt{25} = 5 \)
2. \( \sqrt{7^2 + 9^2} = \sqrt{49 + 81} = \sqrt{130} \approx 11.4 \)
3. \( \sqrt{10^2 + 10^2} = \sqrt{100 + 100} = \sqrt{200} = 10 \)
4. \( \sqrt{5^2 + 8^2} = \sqrt{25 + 64} = \sqrt{89} \approx 9.4 \)
5. \( \sqrt{12^2 + 9^2} = \sqrt{144 + 81} = \sqrt{225} = 15 \)
6. \( \sqrt{6^2 + 7^2} = \sqrt{36 + 49} = \sqrt{85} \approx 9.2 \)
7. \( \sqrt{11^2 + 15^2} = \sqrt{121 + 225} = \sqrt{346} \approx 18.6 \)
8. \( \sqrt{8^2 + 9^2} = \sqrt{64 + 81} = \sqrt{145} \approx 12.04 \)
9. \( \sqrt{20^2 + 10^2} = \sqrt{400 + 100} = \sqrt{500} \approx 22.36 \)
10. \( \sqrt{4^2 + 7^2} = \sqrt{16 + 49} = \sqrt{65} \approx 8.06 \)
11. \( \sqrt{5^2 + 12^2} = \sqrt{25 + 144} = \sqrt{169} = 13 \)
12. \( \sqrt{16^2 + 18^2} = \sqrt{256 + 324} = \sqrt{580} = 24.1 \)
13. \( \sqrt{13^2 + 10^2} = \sqrt{169 + 100} = \sqrt{269} = 16.4 \)
14. \( \sqrt{8^2 + 15^2} = \sqrt{64 + 225} = \sqrt{289} = 17 \)
15. \( \sqrt{30^2 + 40^2} = \sqrt{900 + 1600} = \sqrt{2500} = 50 \)

Answers

E \( \sqrt{85} \approx 9.2 \)
D \( \sqrt{562} \approx 23.7 \)
Y \( \sqrt{169} = 13 \)
O \( \sqrt{130} \approx 11.4 \)
U \( \sqrt{289} = 17 \)
T \( \sqrt{225} = 15 \)
H \( \sqrt{800} \approx 28.3 \)
E \( \sqrt{25} = 5 \)
N \( \sqrt{580} \approx 24.1 \)
R \( \sqrt{2,500} = 50 \)
S \( \sqrt{346} \approx 18.6 \)
P \( \sqrt{89} \approx 9.4 \)
L \( \sqrt{275} \approx 16.6 \)
G \( \sqrt{65} \approx 8.1 \)
A \( \sqrt{200} \approx 14.1 \)
R \( \sqrt{269} \approx 16.4 \)
A \( \sqrt{100} = 10 \)
How Would You Describe a Dead Skunk?

Round each answer to the nearest tenth (if necessary). Find each answer at the bottom of the page and cross out the letter above it. When you finish, the answer to the title question will remain.

1. Find the length of the hypotenuse of each right triangle.

A

B

C

2. A rectangle is 6 m wide and 11 m long. How long is the diagonal of the rectangle?

3. A television screen may be described in terms of the diagonal measure of its screen. If a TV screen is 20 in. wide and 15 in. high, what is the length of its diagonal?

4. A quarterback at point A throws the football to a receiver who catches it at point B. How long was the pass?

5. A rope is stretched from the top of a 7-foot tent pole to a point on the ground 12 ft from the base of the pole. How long is the rope?

6. Kristin and her family left their campsite for a hike. They hiked 5 mi west and then 2 mi north. How far were they from the campsite?

7. The window of a burning building is 40 feet above the ground. The base of a ladder is placed 9 feet from the building. How long must the ladder be to reach the window?

8. The bases on a baseball diamond are 90 feet apart. How far is it from home plate to second base?

9. The lawn in front of Pythagoras Jr. High is in the shape of a rectangle 24 m long and 10 m wide. How many meters shorter is your walk if you walk diagonally across the lawn rather than along two sides of it?

### Table

| D | E | S | A | X | D | T | N | O | I | S | N | T | A | C | K | T | E |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 54 | 29. | 15. | 8 | 13.2 | 12.5 | m | 16.7 | in. | 4 | ft | 12.2 | cm | 6.1 | mi | 13.9 | ft | 42.5 | ft | 127.3 | ft |
| 28.7 | 14.4 | 17.0 | in. | 129.8 | ft | 25. | in. |
Cryptic Quiz

1. What is the opposite of a professional eater?

2. How would you describe a job in the Acme Mitten Co. shipping department?

3. What can be right but never wrong?

For each exercise, find the missing length. (Refer to the diagram at the right.) Round your answer to the nearest tenth (if necessary) and find it in the code. Each time the answer appears, write the letter of the exercise above it.

\[ \triangle abc \]

\[ a = 9, b = 4, c = \]

\[ a = 8, b = 14, c = \]

\[ a = \text{_____}, b = 3, c = 7 \]

\[ a = \text{_____}, b = 5, c = 12 \]

\[ a = \text{_____}, b = 8, c = 10 \]

\[ a = 5, b = \text{_____}, c = 6 \]

\[ a = 4, b = \text{_____}, c = 15 \]

\[ a = 12, b = \text{_____}, c = 13 \]

\[ a = 50, b = 50, c = \]

\[ a = \text{_____}, b = 20, c = 30 \]

\[ a = 6, b = \text{_____}, c = 11 \]

\[ a = 1, b = 1, c = \]

\[ a = \text{_____}, b = 16, c = 25 \]

\[ a = 2, b = \text{_____}, c = 9 \]

\[ a = \text{_____}, b = 15, c = 17 \]

\[ a = 10, b = \text{_____}, c = 22 \]
What Relation Is a Doorstep to a Doormat?

Round each answer to the nearest tenth (if necessary). Cross out the box containing each answer. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

1. For each right triangle, find the length of the side that is not given.

   A
   \[\begin{array}{c}
   \text{8 cm} \\
   \text{6 cm}
   \end{array}\]

   B
   \[\begin{array}{c}
   \text{11 m} \\
   \text{14 m}
   \end{array}\]

   C
   \[\begin{array}{c}
   \text{7 in.} \\
   \text{12 in.}
   \end{array}\]

   D
   \[\begin{array}{c}
   \text{15 cm} \\
   \text{9 cm}
   \end{array}\]

   E
   \[\begin{array}{c}
   \text{13 ft} \\
   \text{10 ft}
   \end{array}\]

   F
   \[\begin{array}{c}
   \text{18 m} \\
   \text{18 m}
   \end{array}\]

2. Yuki just bought a big-screen TV set. The screen has a diagonal measure of 40 in. If the screen is 32 in. wide, how high is it?

3. A 25-foot ladder is leaned against a wall. If the base of the ladder is 7 ft from the wall, how high up the wall will the ladder reach?

4. As Greg swam 80-meter river, the current carried him 30 m downstream. How far did he swim?

5. The mast of a sailing ship is 20 ft tall. A rope is stretched 26 ft from the top of the mast to a cleat on the deck of the ship. How far is the cleat from the base of the mast?

6. Each side of an equilateral triangle measures 12 cm. Find the height, \(h\), of the triangle.

7. Two jets left an airport at the same time. One traveled east at 300 miles per hour. The other traveled south at 400 miles per hour. How far apart were the jets at the end of an hour?

What Does a BONE SPECIALIST Need to Get His Practice Started?

Evaluate each formula below for the given values of the variables. Find each answer at the left and cross out the letter next to it. When you finish, the answer to the title question will remain.

1. \[ d = rt \] where \( d \) is the distance traveled by an object moving at speed \( r \) in time \( t \). Find \( d \) if \( r = 32 \text{ m/sec}, \ t = 8 \text{ sec}. \) ___ m

2. \[ E = IR \] where \( E \) is the voltage in an electric circuit with current \( I \) and resistance \( R \). Find \( E \) if \( I = 2.5 \text{ amperes}, \ R = 60 \text{ ohms} \). ___ v

3. \[ v = 9.8t \] where \( v \) is the speed in meters per second of a free-falling object after \( t \) seconds. Find \( v \) if \( t = 5 \text{ sec}. \) ___ m/sec

4. \[ S = (n - 2)180 \] where \( S \) is the sum of the measures of the angles of a polygon with \( n \) sides. Find \( S \) if \( n = 8 \). ___ °

5. \[ A = 6e^2 \] where \( A \) is the surface area of a cube with edge \( e \). Find \( A \) if \( e = 12 \text{ cm} \). ___ cm²

6. \[ V = hw^2 \] where \( V \) is the volume of a prism with a square base of side \( w \) and with height \( h \). Find \( V \) if \( h = 10 \text{ cm}, \ w = 7 \text{ cm} \). ___ cm³

7. \[ L = \frac{s^2}{30} \] where \( L \) is the approximate length of a skid in feet for a car traveling at \( s \) miles per hour. Find \( L \) if \( s = 60 \text{ mi/h} \). ___ ft

8. \[ F = 1.8C + 32 \] where \( F \) is the Fahrenheit temperature equivalent to Celsius temperature \( C \). Find \( F \) if \( C = 20° \)°. ___ °F

9. \[ B = \frac{4(220 - y)}{5} \] where \( B \) is the recommended maximum heart rate during exercise for a person \( y \) years old. Find \( B \) if \( y = 15 \). ___ beats/sec
1. Identical cubes are stacked in the corner of a room as shown. How many cubes are there altogether?

2. Make this equation correct by changing the position of only one digit.

\[ 101 - 102 = 1 \]

3. Ms. Smucker went to a store, spent half of her money and then $10 more. She went to a second store, spent half of her remaining money and then $10 more. But she then had no money left. How much money did she have to begin with?

4. If 8 widgets equal 4 curlicues and 2 curlicues equal 3 goofups, then 16 widgets equal how many goofups?

5. Draw the figure below without lifting your pencil from the page or tracing over a line previously drawn.

6. Steven has 9 gold coins that are identical in appearance. However, one coin is counterfeit and weighs slightly less than the others. Using a balance scale, how can he find the counterfeit coin in just two weighings?

7. In the following addition problem, the letters A, B, and C stand for three different digits. What digit should replace each letter?

\[
\begin{array}{c}
A \\
B \\
C \\
\end{array}
\begin{array}{c}
+ \\
A \\
C \\
B \\
\end{array}
\begin{array}{c}
C \\
B \\
A \\
\end{array}
\]

8. The teacher noticed there were fewer than 100 students on the playground. When she counted them by 2s, there was 1 student left over. In fact, when she counted them by 3s, 4s, 5s, or 6s, there was always 1 student left over. How many students were on the playground?

9. In the Hope family there are seven sisters, and each sister has one brother. Including Mr. and Mrs. Hope, how many are in the family?

SCORING KEY

8 or 9 — Superstar Genius
6 or 7 — Star Genius
4 or 5 — Genius
3 or less — Genius of the Future
How Can You Find a Double-Decker Bus?

For each exercise, circle the letter of the more reasonable measure. Write this letter in the box containing the number of the exercise.

The chart gives an approximate size for each of the most commonly used metric units of length.

Answers 1 - 3:

- How many cm are in 1 m? 100
- How many m are in 1 km? 1.000

II. Complete each statement. You are changing a unit to a smaller unit.

Answers 4 - 11:

- 8.3 m = 830 cm
- 41.9 cm = 419 mm
- 5.2 cm = 52 mm
- 1.875 km = 1,875 m
- 275 m = 275,000 mm
- 0.4 m = 40 cm
- 3.666 m = 366.6 cm

III. Complete each statement. You are changing each measure to a larger unit.

Answers 12 - 19:

- 12.5 cm = 1.25 m
- 84 mm = 840 mm
- 375 m = 375,000 mm
- 96 km = 96,000 km
- 643 cm = 6.43 m
- 2.5 km = 2,500 m
- 5,000 m = 5 km

They Show the Weight

Why Are Scales Like Roadmaps?

Do each exercise and find your answer in the set of answers to the right. Write the letter of the answer in the box containing the number of the exercise. If the answer has a , shade in the box instead of writing a letter in it.
**What Did the Finger Say to the Thumb?**

Choose the correct answer for each exercise. Write the letter of the answer in the box containing the number of the exercise. The table below may help you.

<table>
<thead>
<tr>
<th>Unit</th>
<th>Approximate Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 milliliter (mL)</td>
<td>capacity of an eyedropper</td>
</tr>
<tr>
<td>1 litre (L)</td>
<td>capacity of a juice carton</td>
</tr>
<tr>
<td>1 kiloliter (kL)</td>
<td>capacity of 4 bathtubs</td>
</tr>
</tbody>
</table>

I. Choose the more reasonable estimate of capacity.

1. a pot of cooking oil
   - A 2 L
   - C 15 L
   - D 25 L

2. a swimming pool
   - A 36 L
   - B 300 mL
   - C 80 mL

II. Complete each statement.

<table>
<thead>
<tr>
<th>Statement</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.5 L =</td>
<td>8500 mL</td>
</tr>
<tr>
<td>0.4 L =</td>
<td>400 mL</td>
</tr>
<tr>
<td>90,000 mL =</td>
<td>90 L</td>
</tr>
<tr>
<td>0.25 L =</td>
<td>0.25 L</td>
</tr>
<tr>
<td>1.75 L =</td>
<td>1750 mL</td>
</tr>
<tr>
<td>40 mL =</td>
<td>0.04 L</td>
</tr>
<tr>
<td>750 mL =</td>
<td>0.75 L</td>
</tr>
<tr>
<td>33,000 L =</td>
<td>33 kL</td>
</tr>
</tbody>
</table>

III. Solve.

<table>
<thead>
<tr>
<th>Equation</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.2 L + 4.8 L =</td>
<td>9 L 40 mL</td>
</tr>
<tr>
<td>12 L - 32 L =</td>
<td>-20 L</td>
</tr>
</tbody>
</table>

**What Do Salmon and Cod Use When They Go to War?**

Choose the correct answer for each exercise. Find the letter of the answer in the string of letters near the bottom of the page and CROSS IT OUT each time it appears. When you finish, write the remaining letters in the rectangle at the bottom of the page. The table below may help you.

<table>
<thead>
<tr>
<th>Unit</th>
<th>Approximate Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 milligram (mg)</td>
<td>capacity of a paper clip</td>
</tr>
<tr>
<td>1 gram (g)</td>
<td>capacity of a paper clip</td>
</tr>
<tr>
<td>1 kilogram (kg)</td>
<td>capacity of a paper clip</td>
</tr>
</tbody>
</table>

I. Choose the more reasonable estimated weight.

1. a nickel
   - A 5 g
   - B 50 g
   - C 500 g

2. a postage stamp
   - A 40 mg
   - B 60 mg
   - C 90 mg

II. Complete each statement.

<table>
<thead>
<tr>
<th>Statement</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.5 g =</td>
<td>6500 mg</td>
</tr>
<tr>
<td>0.6 g =</td>
<td>600 mg</td>
</tr>
<tr>
<td>400 mg =</td>
<td>0.4 g</td>
</tr>
<tr>
<td>125 mg =</td>
<td>0.125 g</td>
</tr>
<tr>
<td>7.25 kg =</td>
<td>7250 g</td>
</tr>
<tr>
<td>60 kg =</td>
<td>60000 g</td>
</tr>
<tr>
<td>0.25 g =</td>
<td>25 mg</td>
</tr>
<tr>
<td>80,000 mg =</td>
<td>80 g</td>
</tr>
</tbody>
</table>

III. Solve.

<table>
<thead>
<tr>
<th>Equation</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.96 g - 800 g =</td>
<td>100 g</td>
</tr>
<tr>
<td>3000 mg - 300 mg =</td>
<td>2700 mg</td>
</tr>
</tbody>
</table>

Answer to puzzle: **FISH TANKS**

**What Should You Study to Learn How to be a Cowboy?**

Cross out the letter next to each correct answer. When you finish, write the answer to the title question to remain.

I. Complete each statement.

<table>
<thead>
<tr>
<th>Statement</th>
<th>Answer</th>

**How to be a Cowboy?**

- A large can of orange juice contains 2.3 L. The can is 25 cm tall and 10 cm in diameter. About how many cups can be filled from the can? 64
- A package of floor wax contains 1.5 L of polish. The container is 18 cm tall and has a diameter of 9 cm. About how many square centimeters of floor can be covered with one package? 882
- A apple weighs 1 kg. The apple is 25 cm in diameter. About how many apples can be filled from the apple? 3
What Has Four Legs and Piles?

This question has two different answers. Part I gives you one answer and Part II gives you the other. Follow the instructions for each part. (Each answer contains the number of the answer.)

I. Circles, hexagons, figures, and the like are to be measured to the nearest one-eighth inch. Write each letter in the column.

II. How many inches are in one foot?

Why Do Elephants Lift Weights?

Measure each line segment below to the nearest one-eighth inch. Find your answer in the answer column. Write the letter of the exercise in the box containing the number of the answer.

What Is the Title?

Do each exercise below. Find your answer in the code and write the letter of the exercise above it. (Each answer contains the number of the answer.)

I. Answer each question.

II. Complete each statement.

III. Complete each statement.

   31. 56°
   32. 56°
   33. 56°
   34. 56°
   35. 56°
   36. 56°
   37. 56°
   38. 56°
   39. 56°
   40. 56°

IT'S WHERE THE FUNNEL BE
Why Couldn’t the Two Elephants Go Swimming Together?

Give the measure of each numbered angle. Find your answer in the Code Key and notice the letter next to it. Write this letter in the box containing the number of the angle. (Assume that lines in each figure that do not intersect are parallel.)

LEBC is a right angle.
LDCE is a right angle.

h Street is parallel to 6th Street.

LFCH is an acute angle.

h Street is perpendicular to Elm Avenue.

LECH is an obtuse angle.
m Avenue is parallel to Disk Drive.

LABE is an acute angle.

Perpendicular lines intersect to form right angles.

Parallel lines never intersect. Elm Avenue is perpendicular to Oak Avenue.

How Did the Judge Find Out About the Stolen Money?

Circle the number-letter pair of each TRUE statement. For these pairs, write the letter in the matching numbered box at the right.

1. Use the figure below, in which EF II GH.
You should find 11 true statements.

- E crosses A at C.
- AEF is a right angle.
- AFB is a right angle.
- ADE is a right angle.
- ABE is an acute angle.
- AFG is an acute angle.
- AEH is an acute angle.
- ADE is a right angle.
- ADE is a right angle.
- ADE is a right angle.
- ADE is a right angle.

They get coal feet.
What Do You Get When You...

1. Cross two ducks with a match?
   Answer: POOP

2. Cross a stick of dynamite with a lemon pie?
   Answer: A-BQ-L-LM-HEE~L~~EL

Find the angle measures indicated. Look for each answer in the code. Each time the answer appears, write the letter of the exercise above it.

- m\angle B = 57°
- m\angle F = 36°
- m\angle AOX = 18°
- m\angle P = 81°
- m\angle R = 72°
- m\angle S = 128°
- m\angle O = 53°
- m\angle E = 67°
- m\angle D = 90°
- m\angle T = 34°
- m\angle Z = 59°
- m\angle M = 37°
- m\angle E = 76°
- m\angle D = 54°
- m\angle BOC = 99°

Can a Polar Bear Go On a Safari?

Write the name that best describes each quadrilateral. (Put each quadrilateral in the smallest or most exact class to which it belongs.) Write the letter of the exercise in the box containing the number of the answer.

- rectangle
- trapezoid
- square
- parallelogram

Why Was Cinderella Kicked Off the Baseball Team?

For each exercise, circle the letter of each figure that belongs in the category named. Arrange these letters to form a word. Then write this word on the line next to the name of the category.

- quadrilaterals
- parallelograms
- rectangles
- squares
- trapezoids

Why Didn't the Snobbish Potatoes Want Their Daughter to Marry a News Broadcaster?

Under each figure, circle the number-letter combination next to each word that correctly names the figure. Write the letter in the matching numbered box at the bottom of the page.

1. A triangle with three sides and three angles.
2. A polygon with four sides and four angles is a.
3. A polygon with five sides and five angles is a.
4. A polygon with six sides and six angles is a.
5. An octagon is a polygon with eight sides and eight angles.
6. A polygon with ten sides and ten angles is a.
7. In the set of figures above, Figure A is a.
8. Figure B is a.
9. Figure C is a.
10. Figure D is a.
11. The point of intersection of two sides of a polygon is called a.
12. A line segment connecting two vertices of a polygon is called a.
13. A polygon with all sides the same length and all angles the same measure is called a.

NOTE: Part II of this puzzle introduces students to the concept of corresponding parts of congruent triangles.

Why Couldn't Orgo Buy a Round Trip Ticket?

Follow the directions for each section. Each exercise will give you a number-letter pair. Write the letter in the matching numbered box at the bottom of the page.

I. Find each pair of congruent figures. Use the number from one figure and the letter from the other.

W 1 E 2 L 3 Z 4 A 5

II. Complete each statement, then find your answer in the answer column. Use the number of the exercise and the letter of the answer.

1. Find the circumference of each circle. Use 3.14 for π.

**D-48**

**What Does a Tuba Call Its Father?**

Give the number of square units in each figure. Find your answer and cross out the letters above it. When you finish, the answer to the title question will remain.

**Exercise:**

1. Find the circumference of each circle. Use 3.14 for π.

**D-49**

**Did You Hear About?**

Find each answer to the appropriate question under it. Circle the letter under it and write the number on the straight line connecting the square by the exercise.

**Exercise:**

1. The width of a rectangular poster is 16 in. Find the length of the longest side. What is the perimeter?

**D-50**

**ANSWERS**
How Was the Wooden Marionette Related to the Wooden Diving Board?

Use a calculator to solve each problem (round decimal answers to the nearest tenth). Write the letter of the answer in the spaces at the bottom of the page.

WORLD RECORD: The largest jigsaw puzzle ever made was 85 ft by 55 ft and had 15,520 pieces. It was constructed by the United Way in Keene, New Hampshire.

1. What was the area of the puzzle in square feet? (Round to the nearest whole number.)
2. What was the area of the puzzle in square inches? (Round to the nearest whole number.)
3. What was the average size of each piece? (Round to the nearest whole number.)

ANSWERS:

1. 4,752,000 ft²
2. 1,230,000,000 in²
3. 28 in²

WORLD RECORD: The world’s largest quilt, designed by A. H. Platteau, measures 16.140 equal-sized squares sewn together.

4. What is the area of the quilt in square inches? (Round to the nearest whole number.)
5. What is the area of each square? (Round to the nearest whole number.)

ANSWERS:

4. 2,571,000 sq in
5. 15,520 sq in

TOPICS: Area of Rectangles

---

What Happened to Mr. Meter When Mrs. Meter’s Mother Flew in for a Visit?

Cross out the box containing each correct answer. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

I. Find the PERIMETER and the AREA of each parallelogram.

ANSWERS:

---

TOPIC: Area of Parallelogram

---

Why Do Elephants Have Ivory Tusks?

Do each exercise and find your answer in the answer columns. Write the letter of the answer in each box containing the number of the exercise.

I. Find the area of each figure.

ANSWERS:

---

TOPIC: Area of Parallelogram

---

What Did the Baseball Coach Look for in Space?

Measure the length and width of each rectangle to the nearest cm. Then estimate the number of each rectangle nearest the greatest cm. When you finish, write the letter of the answer in each box containing the number of the exercise.

---

TOPIC: Area of Rectangles

---

ANSWERS: D-90
What Happens When the Smog Lifts in Los Angeles, California?

Find the AREA and the PERIMETER of each triangle below. Look for both answers in the rectangle. Shade in each area containing a correct answer.

What Game Did Tarzan Like to Play?

Do each exercise below. Find your answer in the answer columns and notice the letter next to it. Look for this letter in the string of letters near the bottom of the page and CROSS IT OUT each time it appears. When you finish, write the remaining letters in the rectangle at the bottom of the page.

What Happens When the Smog Lifts in Los Angeles, California?
### Why Is a Mathematician Like an Airline?

Round each answer to the nearest hundredth (if necessary) and find it in the appropriate answer column. Use 3.14 for π. Fill in the correct unit of measure for each answer you choose. Write the letter of the exercise in the box containing the number of the answer.

### How Do You Get a One-Armed Monkey Down From a Coconut Tree?

Solve each problem. Use 3.14 for π. Find your answer and cross out the letter next to it. When you finish, the answer to the title question will remain.

1. Find the diameter of a circle if the circumference is 8 cm. Round to the nearest tenth. **2.8**
2. Find the diameter of a circle if the circumference is 24.5 m. Round to the nearest tenth. **7.7**
3. The largest living thing on earth is a California redwood tree called the "General Sherman." The circumference of its trunk is about 8.2 ft. Find the diameter of the trunk to the nearest tenth. **26.6 ft**
4. A revolving water sprinkler sprays water in all directions to a distance of 25 ft. What area does it cover? Round to the nearest tenth. **785.4 ft²**
5. PizzaMind Pizza sells a large pizza with a diameter of 14 in. and a medium pizza with a diameter of 11 in. Find the following to the nearest whole number.
   - A. The area of the large pizza. **150 in²**
   - B. The area of the medium pizza. **76 in²**
   - C. How much larger is the large pizza? **74 in²**
6. Nick Claus plans to have a model train running in a circle around his holiday tree. How many feet of track will he need if the diameter of the circle is 30 ft? Round to the nearest whole number. **30 ft**
7. A record has a radius of 6 cm. Find the following to the nearest tenth. **706.5 cm²**
   - A. The area of the record (including the label). **13,060 cm²**
   - B. The area of the label. **706.5 cm²**
   - C. The area of the record that is not covered by the label. **593.5 cm²**
8. The diameter of a basketball hoop is 18 in. The circumference of a basketball is 20 in. Find the following to the nearest tenth.
   - A. The diameter of the basketball. **9.6 in.**
   - B. How much less is the diameter of the basketball than the diameter of the hoop? **8.8 in.**
9. A circle is cut out of a piece of plywood. It is 10 in. around the circumference. The scraps are thrown away. Find the area of the circle. **78.5 in²**
   - A. How many square inches of plywood are thrown away? **21.5 in²**
   - B. How many square inches of plywood are still left? **57 in²**

**TOPIC A: Problem Solving: Novel Applications**
What Is Cold And Comes In Cans?

Find the surface area of each figure. Cross out the box containing each correct answer. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

1. 146 cm²
2. 406 in²
3. 22.6 m²
4. 3 cm
5. 5 cm
6. 4 cm

II. 20 m
1. 9 cm
2. 18 cm
3. 14 cm
4. 8 cm
5. 8 cm
6. 8 cm

What Happened to Zelda After She Swallowed Two Nickels, Three Dimes, and a Quarter?

Given the SURFACE AREA of each prism. Find your answer in the answer columns and write the letters in the spaces over the exercise number at the bottom of the page.

1. 94 cm²
2. 104 m²
3. 9,600 in²
4. 73 m²
5. 25.92 m²
6. 300.56 in²
7. 3.1 m
8. 1.8 m
9. 3 cm
10. 2 cm

Why Did Humpty Dumpty Have a Great Fall?

Do each exercise and find your answer in the answer column. Write the letter of the answer in each box, containing the number of the exercise. Use 3.14 for 

I. Find the lateral area and the total surface area of each cylinder.

1. lateral area: 376.8 cm²
total area: 533.8 cm²
2. lateral area: 251.2 ft²
total area: 351.2 ft²
3. lateral area: 876.06 cm²
total area: 1,130.28 cm²
4. lateral area: 8,792 cm²
total area: 3,187.38 cm²
5. lateral area: 318.26 cm²
total area: 767.38 cm²

II. Find the total surface area of each cylinder.

1. 10 in.
2. 12 cm
3. 8 in.
4. 6 in.
5. 4 in.
6. 2 in.

III. A can of tomato juice is a cylinder with a radius of 7.5 cm and a height of 20 cm. What is the area of the label around the can? 242 cm²

A steel silo is a cylinder with a diameter of 18 ft and a height of 180 ft. How many square feet of steel were needed to make the tank? 3,072 ft²
**What Is Big, Gray, and Lives in California?**

Find the volume of each prism. Write the letter of the exercise in the box above the answer at the bottom of the page.

1. A classroom is 26 ft wide, 32 ft long, and 10 ft high. What is the volume of the room in cubic feet?
2. A swimming pool is 20.6 m long, 8.5 m wide, and has an average water depth of 2.3 m. What is the volume of water needed to fill the pool?
3. A rectangular box is 2 ft wide, 3 ft long, and 4 ft high. How many cubic feet are left for other use if the box is filled with water?
4. An aquarium weighs 22.5 kg when empty. The aquarium is 30 in. long, 14 in. wide, and is filled with water to a depth of 18 in. Water weighs 0.011 lb per cubic inch. How much does the aquarium weigh when it is full of water?

**What Movie Is about a Kid Who Ran Away from Home with His Bicycle?**

Find each answer in the answer columns and notice the two letters next to it. Write these letters in the spaces above the exercise number at the bottom of this page.

2. A rectangular prism has dimensions of 4 cm by 5 cm by 7 cm. What is the volume of the prism in cubic centimeters?
3. A rectangular prism has dimensions of 3 cm by 4 cm by 5 cm. How many cubic centimeters of water will it hold if filled to the top?
4. A rectangular prism has dimensions of 2 cm by 3 cm by 4 cm. How many cubic centimeters of water will it hold if filled to the top?
5. A rectangular prism has dimensions of 1 cm by 2 cm by 3 cm. How many cubic centimeters of water will it hold if filled to the top?
6. A rectangular prism has dimensions of 0.5 cm by 1 cm by 2 cm. How many cubic centimeters of water will it hold if filled to the top?
7. A rectangular prism has dimensions of 0.1 cm by 0.2 cm by 0.3 cm. How many cubic centimeters of water will it hold if filled to the top?
8. A rectangular prism has dimensions of 0.01 cm by 0.02 cm by 0.03 cm. How many cubic centimeters of water will it hold if filled to the top?
9. A rectangular prism has dimensions of 0.001 cm by 0.002 cm by 0.003 cm. How many cubic centimeters of water will it hold if filled to the top?
10. A rectangular prism has dimensions of 0.0001 cm by 0.0002 cm by 0.0003 cm. How many cubic centimeters of water will it hold if filled to the top?
11. A rectangular prism has dimensions of 0.00001 cm by 0.00002 cm by 0.00003 cm. How many cubic centimeters of water will it hold if filled to the top?
Why Did the Elephant Paint His Toenails Red, Green, Yellow, Blue, and Purple?

Find each answer in the appropriate set of boxes at the bottom of the page. Write the letter of the exercise in the box containing the answer.

I. Find the length of one side (s) of each square.

<table>
<thead>
<tr>
<th>Exercise</th>
<th>Side Length (s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. 25 m²</td>
<td>s = 5 m</td>
</tr>
<tr>
<td>B. 64 cm²</td>
<td>s = 8 cm</td>
</tr>
<tr>
<td>C. 400 m²</td>
<td>s = 20 m</td>
</tr>
</tbody>
</table>

II. Find the square root.

<table>

</table>
What Does a BONE SPECIALIST Need to Get His Practice Started?

Evaluate each formula below for the given values of the variables. Find each answer at the left and cross out the letter next to it. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

For each right triangle, find the length of the side that is not given. Round each answer to the nearest tenth (if necessary). Cross out the box containing each answer. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

What Relation Is a Doormat to a Doorstep?

Round each answer to the nearest tenth (if necessary). Cross out the box containing each answer. When you finish, write the letters from the remaining boxes in the spaces at the bottom of the page.

TEST OF GENIUS

Identical cubes are stacked in the corner of a room as shown. How many cubes are there altogether?

Steven has 9 gold coins that are identical in appearance. However, one coin is counterfeit and weighs less than the others. Using a balance scale, how can he find the counterfeit coin in just two weighings?

In the following addition problem, the letters A, B, and C stand for different digits. What digit should replace each letter?

The teacher noticed there were fewer than 100 students in the playground. When she counted them by 2s, there was 1 student left over. In the next place, when she counted them by 3s, there was a student left over; when she counted them by 4s, there was always a student left over. How many students were on the playground?

In the Hope family there are seven sisters, each sister has one brother, including Mr. and Mrs. Hope. How many people are in the family?

SCORING KEY

8 or 9 = Superior Genius
6 or 7 = Star Genius
4 or 5 = Gifted
3 or less = Genius of the Future
